Summary

Curious and creative AI Engineer with 10+ years industry experience shipping software and a proven track record leading and delivering zero-to-one initiatives in generative AI and real-time systems. Mentor, Systems thinker, and frequent topper of Hacker News.

Mechanical Orchard, Senior Staff AI Engineer – 2022 to 2026, remote

Mainframe modernization with applied generative AI.

Python, LLMs, RAG, Neo4j, Agents, MCP, GCP

- Led R&D team through AI adoption, maintaining stakeholder expectations, upholding best practices, and delivering research leading to 4 critical core platform technologies.
- Prototyped agentic mainframe comprehension system, leading to \$24M Series A funding.
- Improved 10X speed, reliability, and accuracy in distributed concurrent agentic COBOL transpilation system.
- Mentored multiple interns and new grads into leadership roles.
- Designed eval and testing loops to unlock reliable results in production environments with millions of data points.

Oneirocom, Interim CTO – 2022, remote

Generative AI pipelines for game content.

TypeScript, GPT, LangChain, ControlNet, StableDiffusion, Vector Databases, Fine Tuning, LoRA

- Developed technical demos and whitepapers with former members of “AI Dungeon” leading to successful seed funding.
- Explored and innovated AI media gen patterns way ahead of the curve.

Kohort, Full Stack Product Engineer – 2020 to 2022, remote

Real-time video collaboration software.

Elixir, TypeScript, React, Postgres, WebRTC, SQL, GCP, speech-to-text

- Reliably shipped product features including early AI integrations for transcription, topic detection, face tracking, and emotion detection, as a lead on a cross-functional team.

Adobe, Senior Software Engineer – 2017 to 2020, Seattle, WA

Collaborative photo library curation.

JavaScript, Elm, Elixir, AWS

- Worked alongside Mark Hamburg, the “architect of Photoshop,” to develop full stack protocols for syncing and rendering 10,000s of photos at scale with near-zero latencies.
- Designed and built a “synthetic users” system for load generation and automation testing based on AI behavior trees, discovering 20% more bugs than alternative testing tools.

Speaker at conferences

- **AI Engineer Summit** 2023 – [Using AI to Build an Infinite Game](#)
- **ElixirConf** 2018 – [Behavior Trees and Battleship](#)
- **ElmConf EU** 2017 in Paris – [Turning the Elm Narrative Engine Inside Out](#)
- **ElmConf US** 2016 at StrangeLoop – [Introducing the Elm Narrative Engine](#)

Articles

Open source

- [Elm Narrative Engine](#) – non-linear storytelling passion project developed for over 5 years.
- Multiple language specific libraries, including [elm-paginate](#), [elm-graph](#), [elixir-behavior-tree](#), and Adobe's [bot-army](#).
- Numerous [game dev projects and tutorials](#).

Skills

- **Languages:** Python, TypeScript, JavaScript, Elixir, Elm, SQL, Cypher, Haskell, Clojure
- **AI/ML Tools:** PyTorch, HuggingFace, LangChain, RAG, OpenAI, Anthropic, LoRA, media gen, image and video models, agent SDK, LLM, VLM, coding agents, context engineering
- **Infra & Data:** GCP, AWS, Postgres, Neo4j, Weights & Biases, Pandas, Real-time
- **Data structures and Algorithms:** trees, graphs, hashmaps, recursion, backtracking, DP
- **Soft Skills:** Leadership, mentoring, technical communication, TDD, agile

Education

University of Colorado Boulder – BFA in Film Production, 2003

Self taught programming and CS concepts

Continuing Education

- Coursera: Data Engineering for AI (2024)
- DeepLearning.ai: Generative AI and RAG Systems (2023)
